Open vs. resolved

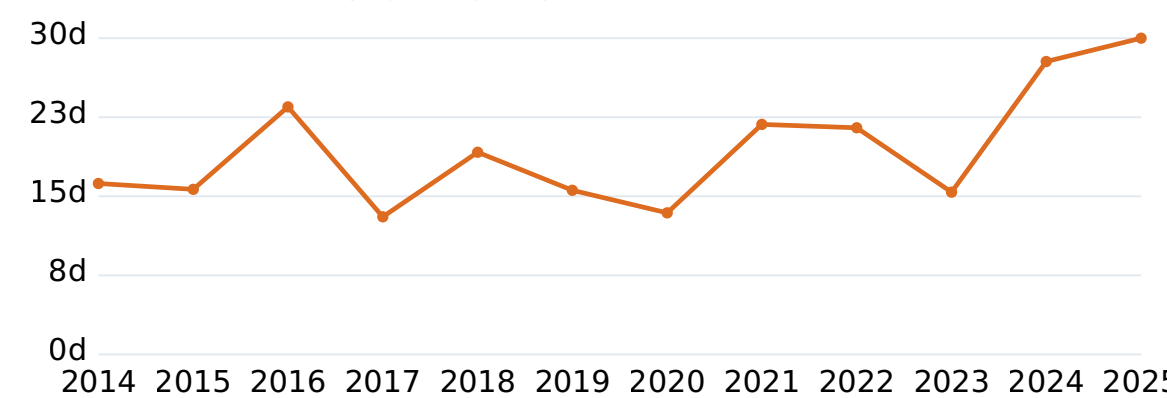

Activity over time

Issues opened vs. resolved per year. Resolution year uses each issue's last-changed date as a proxy for when it closed.

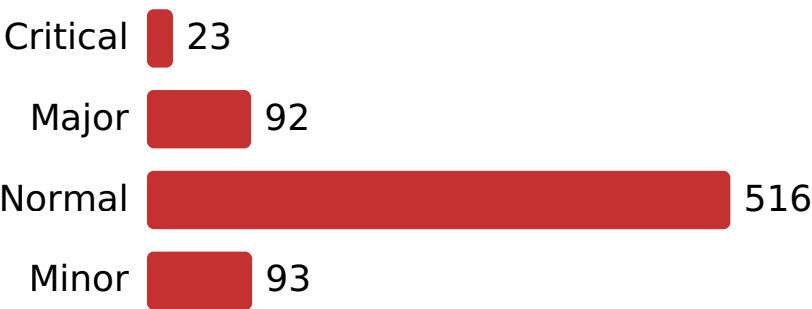

Resolution-time trend

Median days to close, grouped by the year an issue was opened (cohorts of 4+ resolved issues). Shows whether the project is getting faster or slower over time.

BY CORE BRANCH

TOP EXACT VERSION TARGETS

VERSION	ISSUES	SHARE
8.x-1.x-dev	139	19.2%
4.0.x-dev	137	18.9%
4.1.x-dev	116	16.0%
7.x-1.x-dev	105	14.5%
3.0.x-dev	88	12.2%
8.x-2.x-dev	73	10.1%
7.x-2.x-dev	66	9.1%

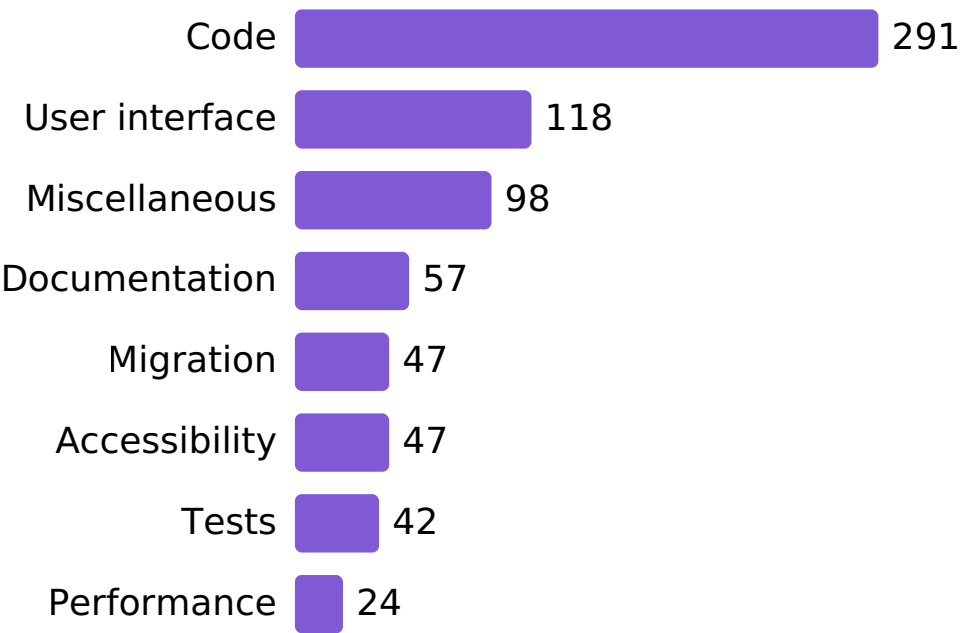

OPEN ISSUES BY SUPPORT POSTURE

Open issues filed against current vs. end-of-life Drupal branches (heuristic — see notes).

159 of 297 open issues (53.5%) target a legacy/EOL branch.

Components

Most active issue authors

By number of issues opened. Usernames resolved for the top contributors.

cron_carla	14

Contribution concentration

How evenly issue-reporting is spread across contributors. A high Gini or top-3 share means the project leans heavily on a few people (low bus factor).

Discussion depth

MOST-DISCUSSED ISSUES

ISSUE	STATUS	COMMENTS
Accessibility: the views integration lacks aria labels	Fixed	67
Notice: undefined index in group membership	Closed (won't fix)	61
Composer install fails with the entity reference field	Closed (won't fix)	55
Notice: undefined index in the entity reference field	Closed (fixed)	52
Add support for certificate generation	Active	47
Automated tests for the catalog	Closed (fixed)	44
Add a hook for the import form	Closed (fixed)	43
Notice: undefined index in the import form	Active	41
Improve the views integration performance on large the REST resource	Fixed	38
Notice: undefined index in quiz scoring	Needs work	37

Oldest open issues

ISSUE	STATUS	AGE
Composer install fails with the catalog	Needs work	12.4 years
Fatal error on the views integration when the import form	Needs work	12.3 years
Accessibility: the REST resource lacks aria labels	Active	12.2 years
Document the group membership workflow	Reviewed & tested by the community	12.2 years
PHP 8.3 compatibility for the REST resource	Needs work	12.1 years
Notice: undefined index in the import form	Active	12.0 years
Composer install fails with SCORM packages	Active	11.9 years
Translation strings in the settings page untranslatable	Needs review	11.9 years
Refactor the settings page to use the import form	Active	11.8 years
Add support for the entity reference field	Needs work	11.4 years

Maintainer bottlenecks

How long currently-open issues have been waiting in review states (age since last change).

53

IN NEEDS
REVIEW

47 days

MEDIAN AGE,
NEEDS REVIEW

30

IN RTBC

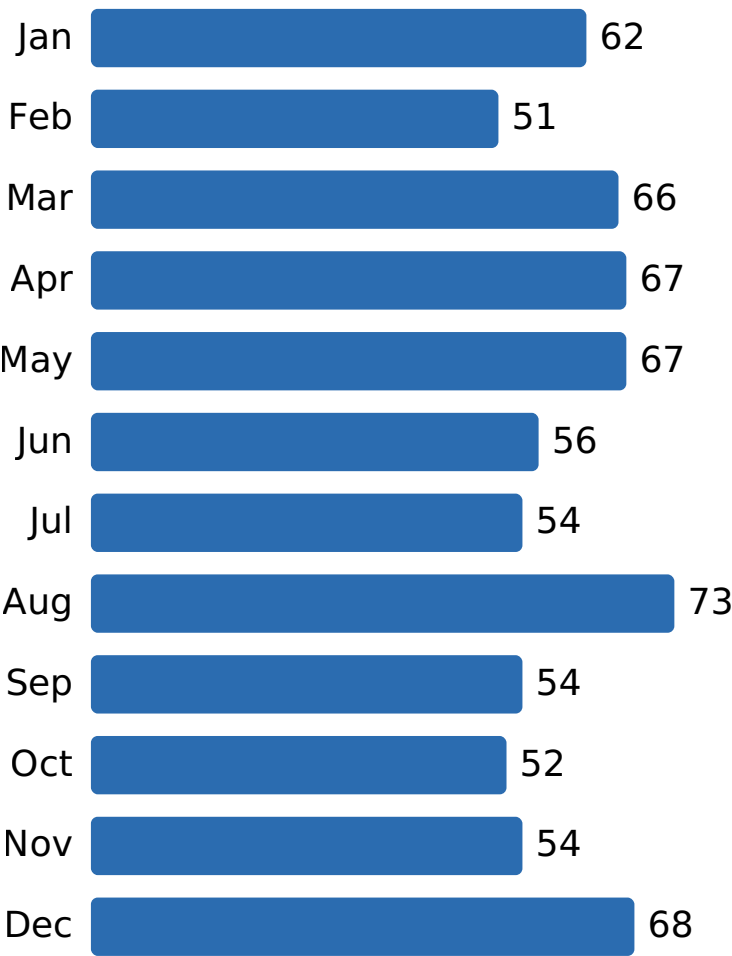

54 days

MEDIAN AGE,
RTBC

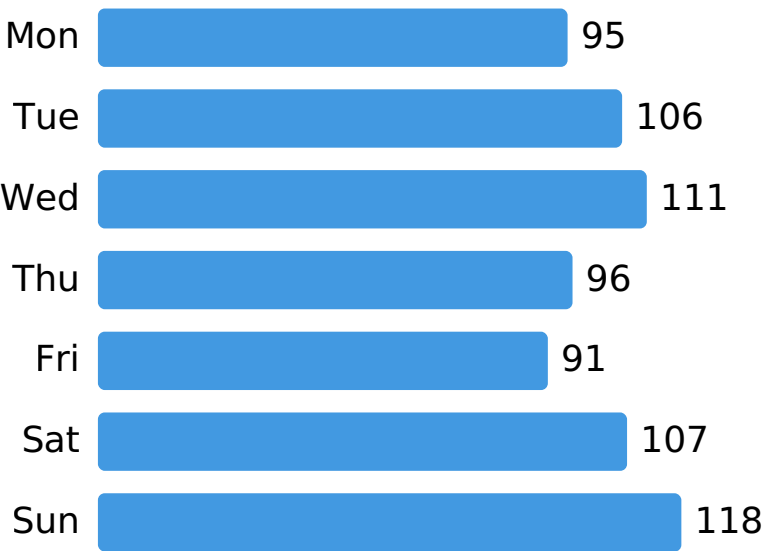

Oldest RTBC issue has been waiting 3.3 years. RTBC is the classic maintainer-attention bottleneck — these are reviewed and ready to commit.

Methodology notes. Data comes from the public Drupal.org api-d7 REST API. “Time to close” uses each issue’s last-modified timestamp as a proxy for its close date, so late edits to old closed issues can inflate it. “Fixed” (status 2) is counted as resolved even though it auto-closes to “Closed (fixed)” later. Author and commenter usernames are resolved only for the top contributors to keep the crawl polite. Support posture (current vs. legacy/EOL) is a heuristic on the branch number and doesn’t account for a project’s own supported-branch declarations. The

resolution-time trend groups issues by the year they were opened, so recent cohorts contain only the faster-resolved issues and can look artificially quick.
